

Ali Monette

Ottawa, Canada • amonette55@gmail.com • (613) 552-4251 • www.linkedin.com/in/alimonette

PROFILE

Software Engineer with 5+ years of experience designing and delivering full-stack systems, developer platforms, automation frameworks, and AI-assisted tooling. Experienced across backend engineering, CI/CD, DevSecOps, enterprise integrations, and infrastructure, with a proven ability to own systems from architecture to production deployment.

SKILLS

Languages

C++, C#, Java, Python, JavaScript, TypeScript, SQL, HTML, CSS

Technical Skills

Node.js, React.js, REST APIs, Docker, Jenkins, Linux, CI/CD, Git

PostgreSQL, Redis, RabbitMQ, Elasticsearch

Apache, Nginx, Virtual Machines, Robot Framework

LDAP, AI APIs, LLMs, JIRA

PORTFOLIO

Portfolio Website | [Live Site](#) · [Source Code](#)

EXPERIENCE

Tools Developer & Specialist, Ross Video • Ottawa, Canada

10/2025 – 06/2026

- Architected and built an AI-assisted web application for Robot Framework test analysis, centralizing execution logs, debug data, test artifacts, and libraries into a unified dashboard and leveraging LLM APIs (OpenAI) to identify likely automation and product defects, significantly reducing investigation time for QA teams.
- Designed and built a fully automated documentation synchronization platform that mirrored Confluence spaces into SharePoint, including a custom Python-based PDF export pipeline to overcome Confluence API limitations and preserve formatting, images, hyperlinks, and styling while enabling reliable nightly synchronization through Jenkins.
- Developed a security scanning orchestration platform integrating Black Duck, Tenable, and Coverity APIs into Jenkins pipelines, automating vulnerability analysis across Git, SVN, and Kiln repositories while reducing reliance on licensed scanning infrastructure.
- Designed and implemented LDAP-based authentication and authorization for internal applications, providing centralized identity management and secure enterprise-grade access control.
- Built internal automation frameworks and developer tooling in Python and Java, including Eclipse-based testing solutions using SWTBot and plugin architectures to support IDE-level testing workflows.
- Engineered a cross-architecture scanning system using QEMU virtual machines to enable ARM64-based Coverity analysis within x86-only infrastructure, expanding departmental coverage without additional hardware investment.
- Architected and maintained Jenkins-based CI/CD pipelines and Linux infrastructure, deploying and managing full-stack environments utilizing Docker, virtual machines, Nginx reverse proxies, SSL-secured endpoints, SQL databases, RabbitMQ, REST APIs, and backend services to deliver reliable and reproducible development and testing platforms.

Ali Monette

Ottawa, Canada • amonette55@gmail.com • (613) 552-4251 • www.linkedin.com/in/alimonette

Software Developer, Case IQ • Ottawa, Canada

01/2022 – 03/2025

- Delivered full development lifecycles and end-to-end integrations for more than 100 client upgrades, modernizing legacy systems while maintaining backward compatibility and collaborating with Product, Platform, and Sales teams to ensure successful implementations.
- Developed asynchronous workflows to replicate client forms, attachments, and child forms, automating previously manual processes - significantly speeding up processing and resolving errors that occurred with high volumes of attachments and nested forms, leading to improved client satisfaction.
- Designed and built efficient API integrations across REST, GraphQL, and SOAP, handling both JSON and XML data formats.
- Developed a CLI tool to automate client SSO configuration, converting hard-coded Jenkins settings into dynamic, user-controlled options. enabling clients to safely manage functionality and reducing configuration errors.
- Authored comprehensive upgrade documentation and technical guides, reducing post-deployment incidents by ~40% across teams (Confluence, GitHub).
- Developed full-stack features for B2B applications, enhancing both UI and backend functionality to improve usability, adoption, and overall experience for thousands of users.

Professor, Algonquin College • Ottawa, Canada

09/2023 – Present

- Teach C++, C#, object-oriented programming, UML, and design patterns, applied mathematics, and game physics/mechanics, with a focus on preparing students for industry-ready roles in software and game development.
- Design and deliver project-based labs and interactive prototypes in Unity and Unreal Engine (2D and 3D gameplay, networking, and design patterns) to reinforce industry best practices.
- Conducted applied research and contributed to curriculum development for the Game Development program by designing and updating courses aligned with current industry trends, including modern Unreal Engine workflows, C++/C# practices.
- Consistently earned strong teaching evaluations (avg. 4.5/5.0).

Lead Application Tester, Case IQ • Ottawa, Canada

01/2020 – 12/2021

- Led QA efforts in front-end testing, uncovering critical bugs early.
- Promoted to QA lead within one month due to initiative and accuracy in issue detection.

EDUCATION

Algonquin College • Ottawa, Canada • Advanced Diploma

- Computer Engineering Technology – Computing Science • HONOURS
Graduated 2021
- Game Development
Graduated 2017
